Dear Euan,

**Flexibility Procurement Statement**

Leep Electricity Networks Ltd is an IDNO business that currently operates radial and isolated networks from LV up to 33Kv. Our strategy is to work with single developers to undertake schemes designed to the requirements of the development to meet the capacity required and therefore our networks are not currently under or over capacity.

We have reviewed requirements relating to the procurement of flexibility services for the coming year of 2024-25 and have reached the following conclusions:

- Given the sites we currently serve and our future connections strategy, we do not have the technical need to be able to increase or decrease neither generation nor demand.
- Due to the nature of the engineering surrounding our sites minimal flexibility is required given that networks are constructed to meet the capacity needed.
- The nature of current demands are known and catered for therefore any potential demand management or flexibility is minimal.

As such we do not intend to procure any flexibility services during 2024-25 however will continue to monitor and appraise this situation, should the need arise.

Should you require any further detail to support our current position, please contact me on 07391 866484.

Yours sincerely

A handwritten signature in dark ink, appearing to read "V Bell".

Vicky Bell

Head of Regulation and Compliance

**For Leep Electricity Networks Limited**
